**Made to Measure Shutters**

## Why Choose Shutters?

**Bespoke shutters are an attractive window covering & will add instant curb appeal to your property. Whatever your space, whatever your style we offer a range of top quality shutters to suit your home decor and your budget.**

- Shutters offer great flexibility with controlling light and privacy.
- Shutters are excellent insulators, providing an added layer during the winter months plus allowing ventilation whilst blocking the direct sunlight in the summer time.
- They can be made to fit any window and can actually make the room feel bigger by losing the heavy drapes and curtains.
- A healthier choice for customers who suffer from allergies as they are a hypoallergenic window dressing which reduce allergens and improve symptoms.
- They add value to your property.
- Easy to use and built to last.
- Stylish and timeless they complement all decors.
- They help block out external noise.
- Can add an extra level of security to your home.

We hope our brochure will inspire you to take the next step to ordering your perfect shutters !

## Anatomy of our shutters

/ 1

**Top Rail.** The top and bottom rail helps to construct the panel. Wood shutters are constructed by using a mortise and tenon joint.

/ 2

**A Mouse Hole** is recessed in the top rail when any front control rod is ordered. The rod sits in this hole when the slats are tilted up to a fully closed position.

/ 3

**A Shutter Frame** is supplied with the shutter panel. A frame can fix directly to a window or inside a window recess.

/ 4

**Slats** tilt and rotate to control light and privacy. We offer 4 slat sizes. Slats tilt upwards to close fully.

/ 5

**Stiles** are the vertical rails either side of the panel. Shutter hinges are attached to the shutter stiles. The Hidden Control Rod option puts the mechanism required inside a stile.

/ 6

**A Central Control Rod** option is a thin vertical wood bar that connects the slats. Moving the rod controls the slats. This control rod can also be supplied as Offset Rod when it is positioned towards the edge of the slats.

/ 7

There is an option to order a **Clearview Control Rod** (not shown) This is a thin metal bar which connects the slats. It is positioned on the back of panels on the edge of the slats.

# Our Shutter Ranges

## Paulownia Wood

Paulownia wood has a fine and knot free grain which makes it the perfect hardwood for shutters. Available in our full range of options – 13 smooth paints & 11 smooth wood stains. We can also supply Paulownia in 4 Limewash finishes. A Limewash finish clearly exposes the woods deeper grain. If your décor is rustic or shabby chic or you like a driftwood appearance then Limewash could be the finish option for you.

Although it's a hardwood Paulownia is approx. 1/3 lighter in weight when compared to other hardwoods. This makes it an excellent choice for Tier on Tier shutters or wider openings.

It's great for the environment too. A single plantation can be harvested several times, providing a sustainable, renewable source of timber. The Paulownia shutter range has a scalloped style Clearview rod which is designed to allow slat operation without any strain on the wood slats. The range offers all 4 rod control options (Central, Off set, Clearview and Hidden) Shaped shutters, Tracked shutters and Solid shutters are also available in Paulownia wood.

## Ashwood

An outstanding shutter with the deepest of wood grains. Ash Hardwood is one of the finest materials a shutter can be carved from. Working with our trusted wood suppliers we select only the best grade Ash to build this premium shutter range from. It's a cut above the rest. The unrivalled deep grain can be accentuated with a rich stained finish or you can opt for a painted finish to ensure your painted shutters really stand out from the rest. If you want to see & admire the grain variation that naturally occurs in wood then this is the range for you.

## Waterproof Shutters

For those areas of your home where windows are in direct contact with water, you'll need shutters that will stand up to moisture and not warp over time. Our waterproof shutters are built to withstand the harshest of environments. They are 100% waterproof, will not fade, warp or peel and the aluminium core PV running through the slat means they are highly durable. Shutters are supplied with waterproof magnet plates and stainless steel hinges. Available in neutral white paints.

# Café Style Shutters

Café Style can also be referred to half height shutters and only cover the lower portion of the window leaving the top part clear for maximum light. If used in a bedroom or lounge then an additional window covering will be required for the top section to ensure darkness and privacy is achieved.

Cream Grey, 89mm

Silk White, 64mm

Ashwood, Natural Stain, 76mm

# Full Height Shutters

Our best selling shutter style, these shutters are designed to cover the full height of the opening. They suit all types and all sizes of windows and doors. An optional divider rail offers practical and aesthetic benefits by giving you independent control of the slats on the upper and lower sections. Matching the number of full height panels to the number of glass panes in your window will give clean lines and an elegant look. Most people prefer to leave panels closed in the frame and simply adjust the slats for light and privacy. However if you plan to open your panels back each day then consider going for thinner bifolding panels.

Traffic White, 89mm

Custom Red, 76mm

Custom Blue, 89mm

# Tier-on-Tier

The most versatile of shutter styles, also known as double hung shutters. Upper panels move and open separately from lower panels allowing maximum light into the room whilst retaining privacy from the street. We recommend this style for windows that are taller than wider. Think of a stable door. Top panels are designed to be opened back on a regular basis, so you should consider ordering thinner bifolding panels to allow the top panels to fold back neatly to the side of the window opening. These shutters work particularly well on taller windows in Victorian and Georgian properties.

# Solid Shutters

/

We offer Solid Shutters in our Paulownia Hardwood. Inspired by the Victorian era these solid panels can be supplied with either a Solid Raised insert or with a Solid Shaker insert. These shutters will offer the best in room darkness but do not offer the same flexibility as plantation shutters as they must be fully opened during the day. There is however an option to order a Combination Style shutter, with a solid part on the bottom and your choice of slat size & control rod option on the top section. A divider rail will separate the two sections but these combination panels are always full height and will always open as one.

Paulownia Wood Combination Shutter. Solid Raised & 76mm slats, Vivid White

Paulownia Wood, Solid Raised, Custom Yellow

Paulownia Wood, Solid Shaker, Custom Paints

# Doors & Tracks

/

We offer a variety of installation options to suit different door sizes. Door panels must have a divider rail included in the panel as this gives taller shutters added structural strength. French doors with adjoining windows can be designed and fitted using multiple wood frames. Wider openings typical of large Bifolding glazed doors should consider a tracked option when home owners want to have unobstructed views to the garden. Tracked shutters are a great solution for both doors and room dividers. Shutter panels glide effortlessly across a discreet track system facilitating smooth operation. Tracks are available with hinged Bifolding panels or our double track system allows front and back panels to Bypass each other.

Signal White, 114mm

Traffic White, 76mm

Custom Paints, 89mm

Custom Paint, 89mm

# Shapes

Arches. Circles. Triangles. Whatever the unusual shape of your window or doorway we can make a shutter to fit it. Don't think you have to settle for a blind on your Velux window – we can even make a shutter for that too.

Velux Shutter, Traffic White, 64mm

Basswood, Custom Yellow, 64mm

# Shutter Details

## Slat Size Options

Your choice of slat will be dependent upon the look you are hoping to achieve. Generally, a small slat offers a more traditional look, whereas a bigger slat will offer a more contemporary look.

Solid shutters are available in Paulownia range only.

## Control Rod Options

### Central Front Tilt Rod

The front tilt rod is the vertical piece of wood which links the shutter slats together and allows all slats to open and close in unison.

A front tilt rod is normally located in the centre of the panel and perceived as the classic plantation shutter look.

### Offset Tilt Rod

The offset tilt rod is the vertical piece of wood which links the shutter slats together and allows all slats to open and close in unison.

However, the offset position is 38mm from the edge of the slats on the hinged side of the panel.

### Clearview Tilt Rod

A Clearview tilt rod is the term given to shutters that have a discreet aluminium tilt rod hidden at the rear of the shutter panel.

To open and close the slats you simply adjust any one of the slats and all slats attached to that rod will open in unison. Please note there is no surcharge for the Clearview tilt.

### Hidden (In Stile) Tilt Rod

The In Stile tilt rod is completely hidden within the panel's stile. To open and close slats simply adjust any one of the slats attached to the In-Stile mechanism and all slats open in unison.

# Paints & Stain Finish

We have a gorgeous selection of paint and stain colours to match your home, whatever your style. Certain colours are available by Shutter range.

## Paints

## Limewash

## Stains

## Fauxwood Paints

# Custom colours to suit your style

If you are looking for something different or need your shutters to add a pop of colour to the room then we'd love to help. Your requested colour is matched and the shutters are painted using our specialist water based & UV protected shutter paint. Beautiful yet durable and designed to withstand the test of time.

We can colour match to F&B, Dulux Trade and Ral colours.

Surcharges apply.

Our image illustrates custom paints, however this shutter is not available to order.

# Key Facts Regarding Shutters

Once surveyed, changes must not be made to the window or surrounding area. Changes could affect the fitting of bespoke shutters (e.g. wall plaster, new tap or windowsill or window handles).

Not all windows are square, so the installer may need to use decorators caulk or trim or carry out a small degree of planing to the wood shutter frame to ensure shutters fit 100% level in some openings.

There may be obstructions like skirting boards or dado rails which will need to be altered. The surveyor should explain.

Shutters are not a blackout product and there may be small light gaps around shutters, especially with 3-sided frame installations.

Café shutters cover the lower section of the window only & usually they are fitted with a 3-sided frame with no piece of frame on the top.

Full height shutters are best fitted with 4 sided frames. Panels can have a dividing rail inserted or a split in the Clear view or Hidden rod mechanism. All options will allow separate movement of slats on top and bottom. However, a full height panel will always move as one.

Tier on tier shutters need a 4- sided frame. Tier on tier means top and bottom panels are separate and can open and function independently from each other. This design is best suited to taller or narrow windows. Wider windows are often best fitted with full height shutter panels. We can supply T posts to support wider installations.

Tracked shutters will have a bigger light gap at the top and the bottom of the panels.

Inward opening windows require special consideration. If window functionality could be restricted after shutters are installed, this should be explained at the point of survey. We offer Vintage L frames and Camber Deco frames which can help overcome such challenges.

Items which can restrict the shutter fitting could be removed prior to installation (e.g. BT boxes, alarm boxes, curtains and poles, large furniture)

Designing your shutters so that panels match the window sections will deliver a great design!
